

Prompt: “We have become great because of the lavish use of our resources. But the time has come to inquire seriously what will happen when our forests are gone, when the coal, the iron, the oil, and the gas are exhausted, when the soils have still further impoverished and washed into streams, polluting the rivers, denuding the fields and obstructing navigation.” President Theodore Roosevelt.

Do we have a duty to conserve, as Teddy Roosevelt believed? Are we living up to this goal? Share at least three ideas in depth.

Live and let others live!

Farms and crops
Tomorrow we reap
Rain and clouds
Tomorrow we need
Oil and gas
Tomorrow we speed
Plastic and glass
Tomorrow we heed
Energy and emissions
Tomorrow we steam
Tomorrow we reap
Today we sow
Too many things don't let you fool
Take care of things, do it now!

Are we doing enough to conserve our natural resources? Are we fighting for our families safety? Are we teaming with the right teams to ensure we have the lavish resources we enjoy today? Maybe maybe not.

Today we are reaping the benefits of the actions of our forefathers. Tomorrow the next generation will reap the fruits of what we sow today. The question is will there be real fruit for them? Will there be any fruit for them? Are we sowing the right seeds today?

Let's think!

Imagine if we don't have any rains , will there be any food? I don't think so. How can we address this situation? Probably by making sure we have enough rains by having enough greenery around. Don't cut the trees and clear the forests , instead plant more trees and have other people do the same. Go digital. Let's live and let others live!

Now have you heard about the harmful effects of plastic in oceans? The hazardous waste is killing the ocean life. The plastic products are so handy but they are also very harmful. Recycling helps. Recycle and reuse. Let's live and let others live!

Going on cars, airplanes and other machines is the way of life nowadays. So is the pollution that emits from those heavy machines and automobiles. It is effecting even the air we breathe and the air every creature breathes. Today everything is manufactured in huge quantities to meet the demand and we rely on manufacturing machines and plants. The more the manufacturing the more the manufacturing waste. We need to come up with more ways to reduce pollution, maybe use more natural products and reusable products. By minimizing pollution, we have better air quality. We live and let other creatures live!

We should be conscious about our actions. We have all the lavish resources that make us feel powerful. With great power comes great responsibility. We have a responsibility to help the future generations live lavishly too.
